— **w3-content-outline.pdf** -- Open your w2-content.docx document and save the document as w3-content-outline.docx. Modify the w3-content-outline.docx document following the steps:

- **Number each paragraph starting with number 1.**
- Organize your paragraphs so there is "**one idea per paragraph**" and if necessary you can create subpoints or bullets of the paragraph to simplify the paragraph.
- **Name each paragraph** by typing and bolding a paragraph-topic name (after the paragraph number) for each paragraph. This process can help you determine link names and additional topics that will be in your website.

- Please next organize your paragraphs by **collecting and moving all the paragraphs that are "related" and "alike" into respective areas** along with their paragraph number and paragraph-topic names. For example, you might have multiple paragraphs in your document pertaining to benefits of your website idea. You should move all of those paragraphs (leaving the paragraph number and name) into the same area of your w3-content-outline document.
- Next, please type and underline above all of the "related" paragraphs a representative "**main-topic link name**" to identify the content that are related and alike. The "main topic link names" will become the main links on your index page. **You should have at least 4 "main-topic link names."**
- When finished, save your completed document as **w3-content-outline.pdf**.
